Hein Htet Aung

Senior Java Developer | FinTech | Microservices
Yangon, Myanmar

Summary

Experienced Java Developer with 5+ years in fintech and insurance domains, specializing in backend development, API integrations, and cloud-based microservices. Open to senior-level opportunities in Malaysia, particularly in financial technology and insurance platforms.

Experience

A bank

Lead Java Developer

August 2025 - February 2026 (7 months)

Yangon, Myanmar

Wave Money

Java Developer

March 2024 - August 2025 (1 year 6 months)

Rain Tree Drive, Pun Hlaing Estate, Hlaing Thayar Township, Yangon 11401, Myanmar

Key Responsibilities:

- Designed and optimized distributed microservices using Spring Boot, Kafka, and Kubernetes, ensuring 99.9% uptime and enabling seamless real-time transaction processing.
- Developed and enhanced financial services, including Send Money, Mobile Top-up, QR Payments, and Cash In/Cash Out, driving financial inclusion and business growth.
- Implemented distributed transaction consistency using TCC, SAGA, and Two-Phase Commit (2PC) for mission-critical workflows like Loan Repayments, Bank Linkages, and Utility Payments.

- Strengthened security and compliance with OAuth2, JWT, and Spring Security, ensuring PCI DSS compliance and fraud prevention across digital payment channels.
- Optimized database performance for MongoDB, PostgreSQL, Oracle, and Redis, reducing query execution time by 40% and enhancing transaction speed.
- Led CI/CD automation using Jenkins, GitLab CI/CD, Argo CD, and HashiCorp Vault, reducing deployment time by 50% and accelerating feature rollouts.
- Enhanced observability and monitoring with ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, and Grafana, reducing production incidents by 35%.

AcePlus Solutions Company Limited

Java Developer

November 2019 - March 2024 (4 years 5 months)

MICT Park, Building 19, 4th floor, Yangon, Myanmar (Burma)

Key Responsibilities :

- Modeled the development of a comprehensive General Insurance Core System, reducing policy issuance time by 30% and increasing claims processing efficiency by 25%.
- Designed and implemented a robust Life Insurance Core System, improving underwriting accuracy by 40% and reducing policy administration costs by 20%.
- Delivered a sophisticated Life Claim System, reducing claims processing time by 35% and enhancing claims settlement accuracy by 30% with Spring Boot, React, and AWS S3.
- Led cross-functional teams in designing and implementing critical insurance systems, improving operational efficiency and customer satisfaction.
- Collaborated with stakeholders to translate business needs into technical solutions, driving innovation and continuous improvement.
